SUPPLEMENTARY INFORMATION: The research reserve system is a Federal and State partnership program administered by the Federal government, specifically NOAA. The research reserve system currently has 30 sites and protects more than 1.3 million acres (5,260 square kilometers) of estuarine and Great Lakes habitat for long-term research, monitoring, education, and stewardship. Established by the Coastal Zone Management Act of 1972, each reserve is managed by a lead State agency or university, with input from local partners. NOAA provides partial funding and national programmatic guidance.

This particular site selection effort is a culmination of several years of local, grassroots-support for a research reserve in Wisconsin. The proposed site[s] presented at this meeting follow a comprehensive evaluation process that sought the views of the public, affected landowners, and other interested parties. State and local agency representatives, Tribal nations, as well as estuarine experts, served as committee members and evaluated site proposals.

General Description of Collection

The Virginia Graeme Baker Pool and Spa Safety Act (Act), 15 U.S.C. Ch. 106, applies to public swimming pools and spas, and it requires that each swimming pool and spa drain cover manufactured, distributed, or entered into commerce in the United States shall conform to the entrapment protection standards of the ASME/ANSI A112.19.8 performance standard or any successor standard regulating such swimming pool or drain cover under section 1404(b) of the Act.

On August 5, 2011, the CPSC published a final rule incorporating by reference ANSI/APSP-16 2011 as the successor standard, effective September 6, 2011. 76 FR 47436. On May 24, 2019, the CPSC published a direct final rule incorporating by reference ANSI/APSP-16 2017 as the next successor standard. 84 FR 24021. The Act requires that, in addition to having the anti-entrapment devices or systems, each public pool and spa in the United States with a single main drain other than an unblockable drain shall be equipped with one or more of the following devices or systems designed to prevent entrapment by pool or spa drains: a safety vacuum release system, suction-limiting vent system, gravity drainage system, automatic pump shut-off system or drain disablement. The CPSC will collect information through the verification of compliance form to identify drain covers, pools, and spas that do not meet the performance requirements in ANSI/APSP-16 2017 and the Act. CPSC staff or the designated State or local government official will take approximately 3 hours to inspect the pool and fill out the checklist on the verification of compliance form. The 2022 VGBA Form they will use is available for viewing at <https://www.regulations.gov> under docket number, CPSC-2009-0073, "Supporting and Related Material."
